

***Amendments to the Specification***

Please amend paragraph [0030] as follows:

[0030]       Figures 1A-C depict the purification of AP205 proteins for use in VLPs, as analyzed by SDS PAGE and Western-blotting. Figures [[1A-B]] 1D and E depict electron micrographs comparing AP205 phage particles to AP205 virus-like particles spontaneously assembled from recombinant protein expressed in *E. coli* and purified. FIG. 1 [[A]]D shows an electron micrograph picture of AP205 phage particles, while an electron micrograph picture of self assembled particles of recombinant AP205 VLP is shown in FIG. 1 [[B]]E.

Please amend paragraphs [0263] and [0264] as follows:

[0263]       Examination of the virus-like particles in Electron microscopy showed that they were identical to the phage particles (FIG. 1 [[A]]D and 1 [[B]]E).

[0264]       FIG. 1[[A]]D shows an EM picture of AP205 phage particles, while an EM picture of self assembled particles of recombinant AP205 VLP is shown in FIG. 1 [[B]]E.
